DETAILED ACTION

Allowable Subject Matter

1. **Claims 1, 3 – 10, 12, 13, and 15 – 20** (now renumbered 1 – 17 respectively) are allowed.
2. The following is an Examiner's statement of reasons for allowance:

While the prior art discloses an A/D Converter for converting an image captured by an image sensor comprised of fast response and slow response pixels to an 8 bit logarithmic digital image, wherein the slow response pixels are compensated by a linear factor to correspond to the fast response pixels, wherein the compensated digital image is separated into individual pixels according color and fast/slow response, wherein individual pixels that are of low quality, due to under-exposure (corresponding to low quality slow response pixels), are identified and replaced by a nearby fast response pixel of good quality of the same color, and, likewise, wherein individual pixels that are of low quality, due to saturation (corresponding to low quality fast response pixels), are identified and replaced by a nearby slow response pixel of good quality of the same color, wherein all the pixels of good quality (fast and slow) have a common (overlapping) dynamic range; however, the prior art does not teach or fairly suggest identifying and replacing individual slow response pixels that are of low quality due to saturation.

3. Any comments considered necessary by Applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
